Impact of the Covid-19 Pandemic on the Company:

The Coronavirus disease 2019 (Covid-19) was declared a pandemic by the World Health Organization in March 2020. Covid-19 has had significant negative impacts on the worldwide economy, resulting in disruptions to supply chains and financial markets, significant travel restrictions, facility closures and shelter-in place orders in various locations. Such disruptions also led to global shortages of electronics and other components, increased costs and extended lead times. Elbit Systems is closely monitoring the evolution of the Covid-19 pandemic and its impacts on the Company's employees, customers and suppliers, as well as on the global economy.

As we last reported on November 23, 2021, we have been taking a number of actions to protect the safety of our employees as well as maintain business continuity and secure our supply chain. We also reported on a number of activities where we are leveraging our technological capabilities to assist hospital staffs and other first responders protecting our communities from the impact of the pandemic. All of these actions remain ongoing.

We have implemented a series of cost control measures to help limit the financial impact of the pandemic on the Company, in parallel to the measures we are taking to maintain business continuity and deliveries to our customers. We also are working on efficiency initiatives with a number of our suppliers. We continue to evaluate our operations on an ongoing basis in order to adapt to the evolving business environment.

During 2020 and 2021 our defense activities, which account for most of our business, were not materially impacted by the pandemic, although some of our businesses experienced certain disruptions due to government directed safety measures, travel restrictions and supply chain delays.

We believe that as of December 31, 2021, Elbit Systems had a healthy balance sheet, adequate levels of cash and access to credit facilities that provide liquidity when necessary. We have given high priority to cash management and adequate cash reserves to run the business.

The extent of the impact of Covid-19 on the Company's performance depends on future developments including the duration and spread of the pandemic, the measures adopted by governments to limit the spread of the pandemic, including implementation of vaccinations, and resulting actions that may be taken by our customers and our suppliers, all of which contain uncertainties. As will be noted in our annual report on Form 20-F for 2021 that will be filed in April 2022, the preparation of financial reports requires us to make judgments, assumptions and estimates that affect the amounts reported. For our financial results for the quarter and the year ended December 31, 2021, we considered the economic impact of the Covid-19 pandemic on our critical and significant accounting estimates. The expected impact of the Covid-19 pandemic did not have a material effect on our judgments, assumptions and estimates reflected in the results. However, our future results may differ materially from our estimates. As events continue to evolve in connection with the Covid-19 pandemic, the estimates we use in future periods may change materially.

Potential Impact of Increase in Company's Share Price on Employee Compensation Plan Costs:

Over the last several weeks, there has been a significant increase in the price of the Company's shares. Should such share price levels continue, or further increase, there would be a significant impact on the costs to the Company under its various stock price linked compensation plans for employees.

*** Non-GAAP financial data:**

The following non-GAAP financial data is presented to enable investors to have additional information on the Company's business performance as well as a further basis for periodical comparisons and trends relating to the Company's financial results. The Company believes such data provides useful information to investors by facilitating more meaningful comparisons of the Company's financial results over time. Such non-GAAP information is used by the Company's management to make strategic decisions, forecast future results and evaluate the Company's current performance. However, investors are cautioned that, unlike financial measures prepared in accordance with GAAP, non-GAAP measures may not be comparable with the calculation of similar measures for other companies.

The non-GAAP financial data includes reconciliation adjustments regarding non-GAAP gross profit, operating income, net income and diluted EPS. In arriving at non-GAAP presentations, companies generally factor out items such as those that have a non-recurring impact on the income statements, various non-cash items including significant exchange rate differences, significant effects of retroactive tax legislation, changes in accounting guidance, financial transactions and other items not considered to be part of regular ongoing business, which, in management's judgment, are items that are considered to be outside of the review of core operating results.

In the Company's non-GAAP presentation, the Company made certain adjustments, as indicated in the table below.

These non-GAAP measures are not based on any comprehensive set of accounting rules or principles. The Company believes that non-GAAP measures have limitations in that they do not reflect all of the amounts associated with the Company's results of operations, as determined in accordance with GAAP, and that these measures should only be used to evaluate the Company's results of operations in conjunction with the corresponding GAAP measures. Investors should consider non-GAAP financial measures in addition to, and not as replacements for or superior to, measures of financial performance prepared in accordance with GAAP.
